"Synopsis This is a review in a question and answer format, which is intended to test the user's knowledge and comprehension of veterinary physiology. All body systems including body fluids, neuromuscular, respiratory, cardiovascular, renal, GI, endocrine and reproductive physiology are covered in this 147 chapter, 1500-question text. Each topic contains questions that examine physiologic concepts and integrated processes. The organization of the topics, a table of contents and an extensive index allow the user to easily access topics of interest. The multiple choice questions are in a similar format to those used in certifying and board examinations, including those used by the Professional Examination Service. Each question is accompanied by the correct answer along with a detailed explanation about why that answer is correct, and why the others are not."

Metabolic and endocrine physiology third edition this book is intended to give readers a quick look at metabolic and endocrine physiology emphasis is placed on instructional figures flow diagrams and tables while text material has been held to a minimum in general
