"Pressestimmen 'The main achievement of this volume is in giving us a more comprehensive account than we have hitherto possessed of European conservation ideologies and their place in the colonial history of Africa. It is impossible in a short review to do justice to the many excellent papers here. This is a very valuable book.' Journal of African History'This book heralds what should become the new era of conservation practice in Africa ? an important contribution to conservation literature.' African Affairs Über das Produkt This inter-disciplinary look at the practice and policies of conservation in Africa brings together social scientists, anthropologists, historians and biologists. The new approach to conservation, the book argues, not only depends on the survival of species and habitats but is also intimately tied to the future of African rural communities.
