"Reseña del editor Complications during airway management occur frequently when treating children. Although tracheal intubation is a routine procedure, there are no pediatric texts dedicated to this essential practice. The lack of specific resources and knowledge makes treating children with complex airways even more challenging. This landmark book is dedicated to the successful management of the complex pediatric airway. It explores and evaluates current research and covers novel topics such as airway ultrasonography and apneic oxygenation. It delineates the risks associated with intubating children, and their preventative measures. Aimed at clinicians involved in airway management in any form, this book covers the basics of airway management and how to perform a variety of essential techniques. Both occasional and exclusive pediatric clinicians will find this a valuable resource to support best practice. The book is supplemented by additional videos online, enhancing the demonstration of devices and techniques discussed in the text. Descripción del libro Difficulties when securing complex pediatric airways can be life-threatening. This practical guide provides clinicians with essential information required to ensure safe management of challenging airways in children. With practical and actionable information, the book details preventative measures for potential complications in airway management. Biografía del autor Narasimhan Jagannathan is a Professor of Anesthesiology at Northwestern University Medical School, Illinois. He practices clinically at the Ann & Robert H. Lurie Children's Hospital of Chicago. Together with John E. Fiadjoe, he has dedicated his career to studying and caring for children with difficult airways. With more than 200 combined publications, they have helped to define the pediatric literature regarding airway management and have lectured internationally and led, hosted, and actively participated in numerous airway workshops. Their career goal of making airway management safer for children has culminated in the publication of this key resource. John E. Fiadjoe is an Associate Professor of Anesthesiology and Critical Care at the University of Pennsylvania, Perelman School of Medicine in Philadelphia, Pennsylvania. He practices clinically at the Children's Hospital of Philadelphia. Together with Narasimhan Jagannathan, he has dedicated his career to studying and caring for children with difficult airways. With more than 200 combined publications, they have helped to define the pediatric literature regarding airway management and have lectured internationally and led, hosted, and actively participated in numerous airway workshops. Their career goal of making airway management safer for children has culminated in the publication of this key resource."

Airway management is the most important skill of the pediatric anesthesiologist but what exactly is the pediatric airway examined through a broad lens the pediatric airway is a posite of the anatomic development of the head face aerod
